

WHAT IS VOLUME LTL?

Volume LTL is an ideal API solution for shippers and 3PLs shipping larger than LTL (12 linear feet, 6 pallets), but smaller than truckload (53 linear feet, 30 pallets).

Customers pay a spot price for the space their freight occupies, not an LTL contract price tied to classification rating.

WHY USE VOLUME LTL?

1 REDUCE COSTS

Eliminate manual processes, reduce errors and redeploy resources to revenue generating activities with direct-to-carrier API communications providing visibility to LTL spot market quotes.

2 INCREASE FLEXIBILITY

A rating option for shipments that don't fit LTL or TL standards, volume pricing gives users greater shipping flexibility, including access to additional capacity and backhaul lanes.

WHY USE SMC³?

As the leaders in LTL rating, SMC³ is the provider of choice for LTL freight APIs and analytical transportation tools. Shippers and 3PLs utilize SMC³'s best-in-class rating solutions to optimize their transportation spend, saving time and money on their LTL shipments throughout North America. SMC³ processes more than 50 million API transactions per day — an unrivaled level of computing power supported by powerful security protocols and redundant data centers.
